Announcing Stoncrete EFX, the Latest Flooring Innovation from Stonhard for Commercial Spaces

June 1, 2020 — Stonhard, the unprecedented leader in manufacturing and installing high-performance seamless floors, has unveiled its latest product for the commercial market. Stoncrete EFX, a poured-in-place, epoxy flooring system, has the look and feel of polished concrete, but with the long-lasting durability and performance of the company's trusted industrial flooring products.

Stoncrete EFX is a troweled epoxy mortar system that provides outstanding performance in commercial spaces, handling heavy foot traffic while offering an easy-to-clean surface that is stain, chemical and fire resistant. Equal to its performance, Stoncrete EFX brings distinction with its wide-ranging design options. With five standard colors offerings, Stoncrete EFX offers three aggregates options including recycled glass (blended amber glass or 100% mirror glass), and domestically-mined quartz. Stoncrete EFX is available in matte, semi-gloss, and gloss finishes.

Designed with commercial spaces like school corridors, office spaces, and retail stores in mind, Stoncrete EFX can be customized to fit the design specifications of any front-of-house space, including industrial facility lobbies and corridors.

Warren Miedrich, Area Manager for Stonhard explains, "Polished Concrete is a look many customers are seeking, but there are downsides to this type of floor application. To apply polished concrete you must grind down a concrete slab. This costs money, and it compromises the concrete slab. We developed Stoncrete EFX because it's a full-strength system, from bottom to top (this includes a highly-protective, final coating) that protects the slab. It is a much smarter investment and you have more controls – color and design and the ability to have a seamless and consistent surface where you will not see patches or imperfections the way you would by only polishing the concrete."
